

## Alarm Monitoring Services (AMS)

**Project** Alarm Receiving Centre  
Remote Video Monitoring  
Major Incident Command

**Scope** Two rooms each with:  
Multi-user control desk  
Supervisor consoles

Alarm Monitoring Services (AMS) provide European wide 24/7 intruder monitoring for blue chip companies to high net worth individuals, covering asset management and risk protection operated from their state of the art, fully accredited ARC based in Citywest, Dublin.

Intech were challenged with the brief of converting an existing industrial / office unit into a state of the art BS 5979 ARC and CCTV monitoring station. With a detailed build specification, in order to achieve accreditation, Intech set out on designing the facility, with the CCTV monitoring station on the ground floor and ARC on the first.

With Intech's many years of experience in offering the total solution, we were able to transform the space on offer. With the experience AMS had working with Intech previously they knew that the facility would be one of a kind and something they would wish to show all there existing and new clients.
