

## Project

Enigma Group Alarm  
Receiving Centre

## Scope

Bespoke technical  
furniture  
Lighting rafts  
UPS and generator  
Carpeting  
Decoration  
Full turnkey package

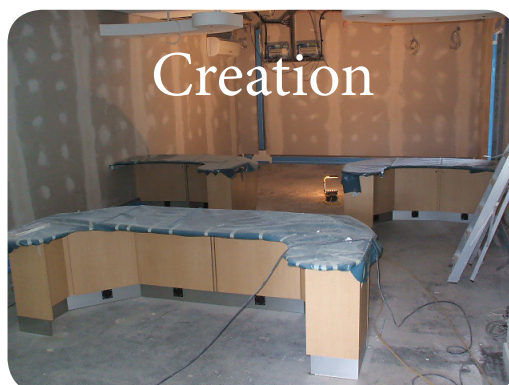

The Enigma Group specialise in delivering a highly personalised and focused range of security and building services to clients both internationally and throughout the UK. Enigma's remote monitoring of security and facilities systems now forms part of a well balanced solution package. Enigma has been accredited by the SSAIB to a BS 5979 Cat II alarm receiving centre and BS 8418 Cat II, which enables them to monitor and react to your alarm and CCTV system with the ability to despatch the police or their authorised response team to your premises.

Intech's total solution consisted of building a fully compliant BS5979 shell in an existing office building, with the new unique wall structure required under the revised edition of the BS5979:2007 standard, consisting of a composite steel plywood structure of equivalent attack resistance.

The internal works consisted of suspended ceiling, feature lighting, electrical installation, ups and generator installation and full decoration, along with technical furniture, bespoke to their needs. Enigma now has a state of the art control facility, and as they are selling a service it was essential that the overall appearance of the facility had the desired impact on potential customers.
