

Project Oldham MBC CCTV Control Room

Scope Custom made monitor stack
Operator & supervisor consoles
Suspended lighting raft

The Brief

After an initial meeting with Oldham Council representatives at Ifsec 2007 at the NEC, Intech were included within the tender list with 4 other console manufacturers for the control room upgrade. Once all the proposals were reviewed Intech was awarded the project after a successful bid.

Prior to awarding the control room contract, the Council's representatives viewed a large number of existing control rooms around the country and were impressed with the solutions being offered by Intech.

How we met the challenge

The design of the control room utilised all of the working space available. With the investment that Oldham MBC has made the control room takes into consideration the latest in innovative technologies and using the durable materials and flexible design, this will be an investment that will last 10-15 years.

On completion of the main control room, the Council representatives awarded additional further control room consoles to Intech that look after all local control alarms in additional control rooms.
