

Project

State of Qatar Control Centre

Scope

Bespoke technical furniture
Full turnkey package

One of Intech's biggest projects to date was the Command & Control suite for the State of Qatar which was in excess of £1million. The entire project was to an extremely high specification and included luxury VIP lounges and WCs as well as a circular central command room made from curved "Smart Glass" in the centre of the suite.

All items were manufactured and shipped from the UK. Intech's on site installation team took sixteen weeks to fully transform the shell into a fully functional control centre. The extent of the works completed by Intech is still the largest single project that has been completed by Intech. Intech Furniture provided the full fit out for this prestigious project consisting of all buildings works, suspended ceiling, lighting features, electrical works, air conditioning and bespoke technical furniture. Due to the nature of the site, and personnel that would frequent the control centre, only the high specification of material and finishes were acceptable.

This control centre has opened many doors in the Middle East and has given Intech the perfect opportunity to bid on other prestige projects and have the reference sites to support the claims.
