

**Project** University of Bradford CCTV Control Room

**Scope** Two operator control desk  
Projector cube surround  
Ancillary furniture

The Times Good University guide 2007 said “In Bradford you will find a diverse mix of people from different backgrounds, faiths, nationalities and ages all sharing the closely-knit city centre campus.”

Whilst this would prove to be an attractive offering for the prospective student it does make for a challenge for Peter Haines, the University’s Security Manager and his team. So when a major redevelopment of one of the main buildings was undertaken Peter saw it as an opportunity to create a state-of-the-art security control centre.

Intech were delighted when Peter asked them to create the design for this new control room to go with the new system being engineered by Clear Image Systems in Huddersfield.

The chosen technical solution was to use a series of large projector cubes for the monitor wall with a two operator control console placed in front and some ancillary storage to one side.

Peter Haines comments “The overall project was very well managed and was delivered on-time and in budget. I am happy with the overall result.”
