

- Project** Wigan MBC Central Monitoring Station.
- Scope** Projection Cube display wall.
Multi operator console
Supervisor control console

The Brief
After working closely with Wigan Council regarding the design of the new Town Centre CCTV control room required due to the relocation of the community safety department, the control room upgrade was put out to tender to four console manufacturers.

How we met the challenge
Taking into consideration the durability and aesthetics of the existing control room furniture, which Intech installed some fifteen years earlier, the innovative design submitted along with competitive pricing offered by Intech resulted in them successfully being awarded the contact after the review process.

Intech then worked in conjunction with Terry Bolton and Tony Hollinrake, Principle Officers for Wigan Council, to finalise an up to date design reflecting the advancements in technology. Wigan is currently undergoing a multi-million pound refurbishment, of which CCTV and security is one of their main focus points. Using 67" rear projection cubes along with multi-operator consoles. The control room has been designed to last another fifteen years just like the previous control room, also manufactured by Intech.
