

Project

North Lanarkshire Council CCTV

Scope

Full design, project management and fit out package:

- Technical Furniture
- Building Works
- Suspended Ceilings
- Electrical Services
- Air Conditioning
- Full Decoration
- Floor Covering
- UPS and Generators
- Mechanical Services

The Brief

North Lanarkshire council is the fourth largest local authority in Scotland, serving a population of approximately 330,000 and has one of the lowest crime rates in the country. However it became apparent that the council had outgrown the capacity of the current system which was situated in several remote locations, therefore a strategic plan was devised to further enhance the monitoring of the CCTV system.

It was decided that in order to serve the public more efficiently and effectively the monitoring should be centralised in a dedicated self-contained control centre. Not only would this help fight crime in the area it would also make North Lanarkshire a friendly place in which to live, work and visit.

How we met the Challenge

Intech were successful in winning the tender for the opportunity to help on this project and Peter Booth, MD, with over 30 years experience in the field produced a unique conceptual design, with a total solution for the project consisting of a full build, project management and fit-out of the new facility.

Intech worked closely with Scotsfield Fire and Security, Wallace Whittle and of course the client. Together they were able to produce a full working control centre which incorporated innovate technology with the use of rear projection screens, making it more flexible and easier to use.
